Rishikesh Akkalwar

Mumbai, India (open to relocate: Bengaluru, Hyderabad) | +91 75584 63339 | rushikeshakkalwar@gmail.com
LinkedIn | GitHub | Portfolio | HackerRank | LeetCode

Education

Woxsen University — Hyderabad, India
B.Tech in Computer Science and Engineering (AI & ML), CGPA: 3.2/4 — *2022 – 2026*
- **Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering.

Decent Junior College — Nagpur, India
Class XII (HSC), Science, Maharashtra State Board: 91.33% — *2022*

Experience

VeePhoenix Compliance Pvt. Ltd. (Vivnovation) — Remote
Product Development Intern | US healthcare client (HIPAA) — *Aug 2025 – May 2026*
- **Medicare billing auditor:** rules engine that validates billing lines (ICD-10, episode dates, CPT, service dates) and fuzzy-matches order PDFs; in a 4-agency pilot it flagged **482 of 1,255** lines (**38%**) for rework, each with a fix.
- **RPA audit platform (sole developer):** FastAPI + Firestore service (**11** REST endpoints) that ingests bot runs via API-key-protected bulk APIs and reconciles signed vs. unsigned orders across a **157-agency**, 9-EHR RPA fleet.
- Shipped its React/Vite dashboard and GitHub Actions CI/CD (static checks, Docker image to GHCR), a nightly batch audit, Prometheus metrics, health checks, backoff retries and daily email and webhook alerts.
- **MediSync (sole developer):** designed and built a **roughly 8K-line** Kinnser EHR ETL with Selenium extraction, schema validation, JWT-authenticated idempotent upserts (patient, episode, order, document) and cached NPI lookups.
- **Physician-order bot:** extended a Selenium/pdfplumber bot that parses NPI, MRN and episode dates from PDFs, bulk-uploads orders to a REST API and closes the signed-order loop with daily reports.

Projects

Chess Assist Teardown — Reverse-Engineering a Chrome Extension | *Node.js, Babel* | **GitHub** — Sep 2026
- Wrote a static two-pass Babel AST deobfuscator (constant folding, anti-tamper removal, lookup-table inlining, control-flow restructuring, renaming **500+** identifiers): **1.1 MB** of obfuscated JS became about **9,800** readable lines.
- Reconstructed the full system (DOM-to-FEN scraping on 4 sites, in-tab Stockfish over UCI, CDP autoplay) and proved its "ELO" setting is just a search-depth knob (1 to 12) on full-strength Stockfish.
- Disclosed security and privacy issues in **8** technical write-ups: a remote kill switch on a raw-IP Socket.IO server, plaintext password storage, and silent upload of usernames and game URLs.

Buy or Wait? — Guardrailed LLM Finance Agent, HackerRank Orchestrate 2026 | *Python* | **GitHub** — Sep 2026
- 24-hour hackathon build: LLMs turn untrusted messages and bill images into JSON-schema facts; a deterministic engine simulates **86 days** of cash flow to pick the best payment plan for **250** requests in 5 currencies.
- Injection-safe by design: every model reading is cross-checked by a rule parser or on-device OCR, message text never reaches decision code, and a planted scam instruction changed no output.
- Built an evaluation harness with exact-match scoring and split-half overfitting checks; matched **24/25** labelled samples on status and **25/25** on payment method, using 10 batched model calls for 250 requests.

Blinkit Sales Analytics Dashboard | *Power BI, Excel* | **GitHub** — 2024
- Built an interactive Power BI dashboard on **8,523** grocery items: sales, ratings, category mix and outlet breakdowns.
- Found Tier 3 medium outlets the most profitable, and fruits, vegetables and snacks the top-selling categories.

Certifications & Achievements

- **HackerRank Certified:** Software Engineer (2026), Software Engineer Intern (2025); SQL (Advanced), REST API (Intermediate), JavaScript (Intermediate), Python (Basic), Problem Solving (Basic).
- **IBM Specialization (2026):** Building AI Agents and Agentic Workflows — LangChain, LangGraph, CrewAI, AutoGen, BeeAI.
- **Coursera:** TensorFlow for AI, ML & Deep Learning (DeepLearning.AI, 2024); Neural Networks with Keras (IBM, 2024); Data Structures and OOP in Java (UC San Diego, 2023); Operating Systems (Akamai, 2024); Web Development (UC Davis, 2025).
- **Leadership:** Woxsen Student Council (2 years), helped organise student-engagement events; member, Codex coding club.
- **Activities:** Led the university music club as lead vocalist; tournament chess player; **Top 50**, Tata Crucible Campus Quiz 2023.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C++, HTML, CSS
Backend & Frontend: FastAPI, Node.js, REST API design, JWT auth, Pydantic, React, Vite, Tailwind CSS
AI & LLMs: Gemini/Claude APIs, LangChain, LangGraph, CrewAI, AutoGen, LLM evaluation, prompt-injection defense
Databases & DevOps: Firestore, MongoDB, SQLite, Docker, GitHub Actions (CI/CD), Azure Bicep, Prometheus, Git, Linux
Data & ML: Pandas, TensorFlow, Keras, Power BI, Excel, Google Sheets, dashboards and KPIs, ETL pipelines
Automation & Tooling: Selenium, RPA, pdfplumber, OCR, rapidfuzz, Babel AST, Chrome DevTools Protocol (CDP)
Healthcare Domain: HIPAA, EHR integration (Kinnser, Axxess), ICD-10 and CPT billing rules, NPI Registry
CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design
